

VEROLITE

LEXAN MULTIWALL PANELS

MULTIWALL POLYCARBONATE SHEET

Verolite Lexan Multiwall Polycarbonate Panels are a versatile material that is commonly used in various exterior roof and wall applications. It offers several advantages over traditional materials. Their ability to provide a combination of outstanding strength, proper light transmission, and thermal insulation makes them an attractive option for any project.

FEATURES & BENEFITS:

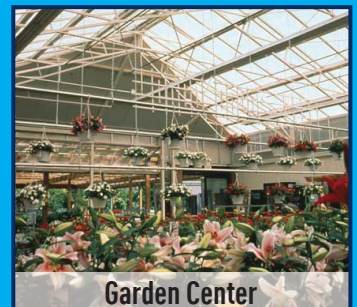

- **Virtually Unbreakable**
- **High Light Transmission**
- **Thermal Insulation**
- **Anti-Drip / Anti-Fog Coating**

Available in a variety of gauges & colors:

Clear | Bronze
Soft Light | Opal

A cost effective alternative to traditional glazing!

High Light Transmission

Multiwall panels allow a high degree of light transmittance, providing ample natural light inside the structure while blocking out harmful UV rays. Other colours are available with varying light transmittance to suit your needs.

Impact Strength

Multiwall polycarbonate panels provide excellent impact strength and stiffness, making them durable enough to withstand extreme weather and external forces.

Thermal Insulation

The cellular structure of multiwall polycarbonate panels enables them to trap air within their flutes, providing excellent thermal insulation properties.

Condensation Control

An anti-condensate / anti-fog coating is applied to the panel, preventing moisture buildup and eliminating potential water damage.

Durable and Lightweight

Multiwall polycarbonate panels are 200x stronger than glass! Despite being lightweight, they are almost unbreakable and easy to handle on-site.

Warranty

LEXAN™ VEROLITE™ Sheet carries a ten (10) year limited warranty on breakage; will not break due to loss of impact strength through weathering and will not display excessive yellowing and loss of light transmission. The **Verolite Extended Warranty provides 5 years additional coverage** for light transmission and yellowness.
